

SMART CARD

Subscriber smart card is a "key" to the scrambled TV content broadcasted by TV operator which works with UMT head-end conditional access systems.

To watch digital TV channels scrambled by our head-end systems you need to provide your subscribers with smart cards.

The proposed smart cards on this web-page are worked with our CAS.

The one smart card has its own unique ID which is stored in CAS database. Card must be used with STB (set top box) or CAM (condition access module) which supports actual CAS.

Smart cards are programmed by manufacturer using special programmer. Smart card programmer can be purchased from us. It is special kit, including the license, for CAS.

Subscriber ID can be changed later by the operator, operator ID cannot be changed in the future. Thus, once programmed, the card belongs to the operator, which has programmed it.

Card has standard CR80 size.

Taking into consideration that we (UMT LLC) are developer and system integrator, also do not stop on our technical growth and improvement, know that view of all our devices and equipment including their technical parameters may be different from pictures presented on website and parameters listed on each device webpage.

Note! All details customer has to confirm in advance during ordering and before payment. Those parameters that were not specified and / or were not agreed while ordering will be implemented as basic at the discretion of the manufacturer. Each our customer has 1.5 year warranty and 7 year aftersales support for whole range of our products.
